JULIANA SOPURUCHI UDEORJI

JUNIOR CLOUD ENGINEERING & NETWORKING

Nigeria | julianahonour20@gmail.com | GitHub | LinkedIn

PROFILE

Cloud engineering learner and hands-on project builder refreshing core cloud and networking knowledge through practical AWS exercises. Brings an active AWS Certified Cloud Practitioner certification, structured QA/testing experience, and a documented habit of working through technical tasks, recording evidence, and improving based on results. Seeking a junior opportunity to contribute, learn from experienced engineers, and grow in cloud infrastructure and networking.

TECHNICAL SKILLS

Cloud / AWS	AWS Cloud Quest and hands-on practice; IAM, EC2, VPC, databases, EFS, VPC connectivity, highly available application concepts; CloudFormation study.
Networking	Networking fundamentals and ongoing study; VPC networking concepts, connectivity, and network-related cloud architecture practice.
Tools / Workflow	Git, GitHub, Postman, Jira, Playwright; documentation, issue tracking, test evidence, and structured troubleshooting.
Programming	Python fundamentals in progress; beginner practice with variables, operators, and functions.

SELECTED HANDS-ON PROJECTS

AWS Hands-on Projects | github.com/sopskistar/AWS-hands-on-projects

Documented AWS practice covering cloud architecture exercises and concepts including VPC, EC2, IAM, databases, EFS, VPC connectivity, and highly available applications. Use the repository README and project evidence to demonstrate the exact exercises completed.

Python for Cloud — Learning Repository | github.com/sopskistar/python-for-cloud

Beginner Python practice intended to build foundations for future cloud-related automation. Do not present this as completed production automation.

QA Practice and Test Automation | QA practice | Playwright QA

Created structured test cases and bug reports, practised API testing with Postman, and built Playwright tests against a demo application. These projects demonstrate documentation, repeatable test workflows, and evidence-based problem investigation.

RELEVANT EXPERIENCE

Software Testing / Crowdtesting — Test.io | 2018–2021

Participated in crowdtesting assignments, investigating software behavior and reporting issues according to task requirements. This experience supports a careful, test-driven approach to technical work.

Domain Investing & Sales | 2020–Present

Built experience researching domain names, evaluating digital assets, and selling domains through DAN and Afternic, with more than $40,000 in domain sales. This is entrepreneurial sales experience, not cloud engineering employment.

CERTIFICATION

AWS Certified Cloud Practitioner — reported active; verify current status and add the official credential/badge URL before submitting applications.

EDUCATION & CONTINUOUS LEARNING

Studied cloud engineering in 2024 and continue to refresh cloud and networking fundamentals through hands-on practice and project work. Python fundamentals are also in progress. Add formal education details here only if relevant and verified.

Portfolio / project evidence: GitHub links above. Tailor this résumé to each vacancy and verify all dates, credential status, and project details before applying.
